TOYOTA LANDCRUISER 200 SERIES WITH KDSS SYSTEM

Please note when fitting springs to Toyota Landcruiser 200 Series or Lexus LX Series vehicles fitted with Toyota's Kinetic Dynamic Suspension System (KDSS), also referred to by Toyota as a "hydro-mechanical semi active anti roll bar"

Please be advised of the fitting procedure:

1. Suspend vehicle on 2-post type chassis hoist allowing wheels to hang.
2. Locate the KDSS valve housing.

NOTE: The valve housing is located on the left-hand side of the vehicle, on the inside of the chassis rail, roughly halfway between the front and the back of the vehicle.

3. Using a 5mm hex key, open the 2 leveling valves 3 full rotations anti-clockwise. (Access is from underside of the KDSS valve)

NOTE: The KDSS system is now open and the sway bar ends should be able to be freely manipulated with little effort, allowing spring / strut removal and installation.

NOTE: THE VEHICLE MUST NOT BE DRIVEN WITH THESE VALVES OPEN AS THIS WILL COMPROMISE THE SYSTEM AND RENDER THE VEHICLE UNSAFE TO DRIVE.

4. With the vehicle sitting on level ground, close both KDSS leveling valves by turning them in a clockwise direction and then tightening.

TOYOTA LANDCRUISER PRADO 120/150 SERIES WITH KDSS SYSTEM

Please note when fitting springs to Toyota Landcruiser Prado 120/150 Series fitted with Toyota's Kinetic Dynamic Suspension System (KDSS), also referred to by Toyota as a "hydro-mechanical semi active anti roll bar". This fitting procedure must be strictly adhered to when removal of any suspension component is performed.

FAILURE TO ADHERE TO THIS PROCEEDURE WILL RESULT IN A MALFUNCTION OR DAMAGE TO THE KDSS SYSTEM

Please be advised of the fitting procedure:

1. Suspend vehicle on 2-post type chassis hoist allowing wheels to hang.
2. Locate the KDSS accumulator.
NOTE: The valve housing is located on the left-hand side of the vehicle, on the inside of the chassis rail, roughly halfway between the front and the back of the vehicle.
3. Remove the steel protective shield.
4. Locate shutter valve bolts on the side of the accumulator.

**Unscrew the shutter valve bolts 1 1/2 - 2 1/2 turns MAXIMUM
DO NOT REMOVE SHUTTER VALVE BOLTS OR UNSCREW
ANY FURTHER THAN ADVISED**

5. The KDSS system is now open and the sway bar ends should be able to be freely manipulated with little effort, allowing spring / strut removal and installation.

NOTE: THE VEHICLE MUST NOT BE DRIVEN WITH THESE VALVES OPEN AS THIS WILL COMPROMISE THE SYSTEM AND RENDER THE VEHICLE UNSAFE TO DRIVE.

6. With the vehicle sitting on level ground, close both KDSS leveling valves by turning them in a clockwise direction and then tightening. Reinstall protective shield.

Warranty Terms and Conditions

Jenkins Springs Pty Ltd trading as West Coast Suspensions—4WD Warranty Statement

West Coast Suspensions (hereafter referred to as WCS) warrant all WCS four-wheel drive parts to the original purchaser for a period of 3 years or 100,000 kilometres whichever occurs first for private vehicles. Commercial and Fleet vehicles warranty is for a period of 1 year or 20,000 kilometres whichever occurs first. Limited warranty would apply to product distributed internationally. This would need to be scheduled at point of purchase. Performance parts such as remote reservoir shocks are warranted for a period of 12 months or 20,000 kilometres.

WCS reserves the right to repair or replace, at their discretion, any product found to be defective in either material or workmanship, within the warranty period, provided the failure or breakage was incurred under conditions of normal use.

No claim for warranty will be entered into when product has been damaged due to; negligent use of product, driver abuse, accident damage or motor sport.

Limited warranty would apply to product distributed internationally, mining and fleet applications. These would need to be scheduled at point of purchase. Furthermore, WCS will not warrant any product when used contrary to that specified by the current WCS catalogues or WCS company personnel.

WCS will not be liable for claims when product has been incorrectly installed or installed to mating parts which are of unacceptable tolerances.

Labour will only be covered under warranty provided the parts were originally fitted by WCS. Claims for labour costs which are incurred by the end user for removal and refit when product was originally installed by the end user will not be entered into.

All costs incurred for freight for the return of failed product or to replace the failed product is the responsibility of the end user (see 'Warranty Procedure' in next column).

WCS accept no responsibility for consequential damages to associated products relating to the failure of the component or injury to any person or persons or possessions. WCS will not be liable for claims for inconvenience caused or commercial loss due to product failure.

WCS reserves the right to modify or change product specification and accept no obligation to provide modification to product previously manufactured and distributed.

Although every effort has been made to ensure that the printed information in the catalogue is correct, WCS must disclaim responsibility for specification and application errors.

It is the responsibility of the end user to establish that the products being purchased comply with local vehicle modification legislation.

West Coast Suspensions—4WD Warranty Procedure

To ensure prompt processing for claims on components deemed to be defective WCS ask that the following procedure be adhered to. Failure to follow procedure could result in a delayed assessment of your warranty claim.

The installer or end user will be required to make contact with WCS Warranty department and inform them of the pending warranty. Once an approval number has been issued the suspect product and relevant documentation (eg. copy of invoice and completed WCS Assessment Form) can be transported to WCS.

Reimbursement for labour costs will be covered only if the parts were originally fitted by WCS. Those claims for labour costs which are incurred by the end user for removal and refit when the product was originally installed by the end user will not be entered into.

Furthermore, the costs incurred for freight for the return of the failed product or to replace failed product is the responsibility of the end user.

The WCS Warranty officer will at his discretion make a decision concerning the claim. The Warranty officer will repair, modify or replace the defective component.

Excluded from warranty will be any item where breakage or premature wear has occurred due to incorrect installation or when components are fitted to mating parts which have unacceptable tolerances.

Read this to save money and time...

Have you ever heard these words "But it was level before you worked on it..." and been unable to dispute them with hard facts? Get the facts before you start pulling the vehicle apart.

Please spend the few minutes it takes to complete this form as this could save you hours of work rectifying a problem that need not have occurred.

All measurements must be taken with the vehicle on level ground. Measurements taken after installation must be done after the vehicle has been road tested and the new parts have settled.

Ride heights are measured in millimetres from the centre of the wheel hub to the wheel arch. If flares are fitted, measure to the lip of the metal part of the guard (see Diagram 1). On some vehicles, (eg. cab chassis) this is not possible or practical. In this instance, measurements should be taken between the bumpstop and its striker plate (see Diagram 2).

If a vehicle measures "lop-sided" at the wheel arch, also check the bumpstop clearances - this will help to determine if the chassis is bent or the body is not true to the chassis. Measure and record on the installation form the free height of the new coils, or the free camber of the new leaves, before fitting to the vehicle. Also take note of the old coils or leaves once removed - are there any discrepancies in the new height/camber? Were the tallest ones on the driver or passenger side? This information is invaluable when sorting problems with vehicles that don't sit level.
